

Abstract of the Disclosure**HUMAN SUPPRESSOR OF FUSED**

5 The present invention is directed to novel polypeptides having homology to a polypeptide suppressor of the
B7
cont. Drosophila melanogaster fused protein and to nucleic acid molecules encoding those polypeptides. Also provided
10 herein are vectors and host cells comprising those nucleic acid sequences, chimeric polypeptide molecules
 comprising the polypeptides of the present invention fused to heterologous polypeptide sequences, antibodies which
 bind to the polypeptides of the present invention and to methods for producing the polypeptides of the present
 invention.
